

Properties (2)

l a z y

- the function is evaluated the first time the property is accessed
- the result is cached
- subsequent access returns the cached result

3

2

```
data class Client(val firstName: String, val lastName: String) {  
    val fullName: String by lazy {  
        "$firstName $lastName"  
    }  
}
```

Properties (2)

lazy

```
data class Client(val firstName: String, val lastName: String) {  
    val fullName: String by lazy {  
        "$firstName $lastName"  
    }  
}
```

- the function is evaluated the first time the property is accessed
- the result is cached
- subsequent access returns the cached result

Could a lazy property be mutable (`var`)?
