

Constructors

primary constructor

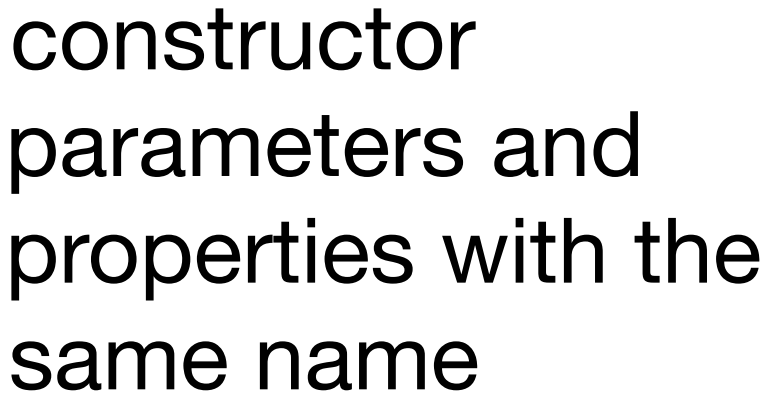

constructor
parameters and
properties with the
same name

W

just constructor
parameter (no
property by default)

class Client(val name: String)

```
class Client(name: String) {  
    val name: String  
  
    init {  
        this.name = name  
    }  
}
```

Constructors

primary constructor

```
class Client(val name: String)
```

constructor
parameters and
properties with the
same name

just constructor
parameter (no
property by default)

```
class Client(name: String) {  
    val name: String  
  
    init {  
        this.name = name  
    }  
}
```

```
val wade = Client("Wade Watts")
```

Constructors

explicit primary constructor
