

meritance

```
interface Identifiable {  
    val id: String  
  
    fun isSameAs(other: Identifiable) = id == other.id  
}
```

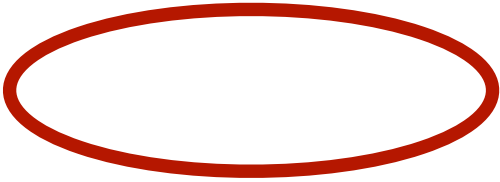

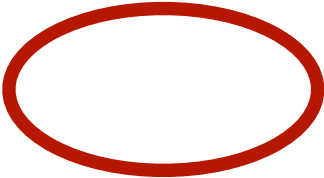

same syntax for extends
and implements

mandatory for any overridden fields
or functions

calls the super
constructor

2

6

```
open class Person(val name: String)
```

```
class Client(override val id: String, name: String) : Person(name), Identifiable
```

Inheritance

```
interface Identifiable {  
    val id: String  
  
    fun isSameAs(other: Identifiable) = id == other.id  
}
```

```
open class Person(val name: String)
```

same syntax for extends
and implements

```
class Client(override val id: String, name: String) : Person(name), Identifiable
```

mandatory for any overridden fields
or functions

calls the super
constructor

Inheritance

explicit constructor
