```kotlin
data class Client(val firstName: String, val lastName: String) {
    var birthdate: LocalDate? = null
}
```

# Data Classes

properties in class body

- `birthdate` is not used in `equals()`/`hashcode()`

- `birthdate` is not used in `toString()`

- `birthdate` doesn't have a `componentN()` function

- `birthdate` is not a `copy()` function parameter

# Data Classes
## properties in class body

```
data class Client(val firstName: String, val lastName: String) {
    var birthdate: LocalDate? = null
}
```

- birthdate is not used in equals()/hashcode()

- birthdate is not used in toString()

- birthdate doesn't have a componentN() function

- birthdate is not a copy() function parameter

# Data Classes
## restrictions

- the primary constructor should have at least one parameter

- all primary constructor params need to be marked as properties (`var` or `val`)

- cannot be

  - abstract

  - open

  - sealed

  - inner
